

## Application Briefing: OLS.GATEWAY

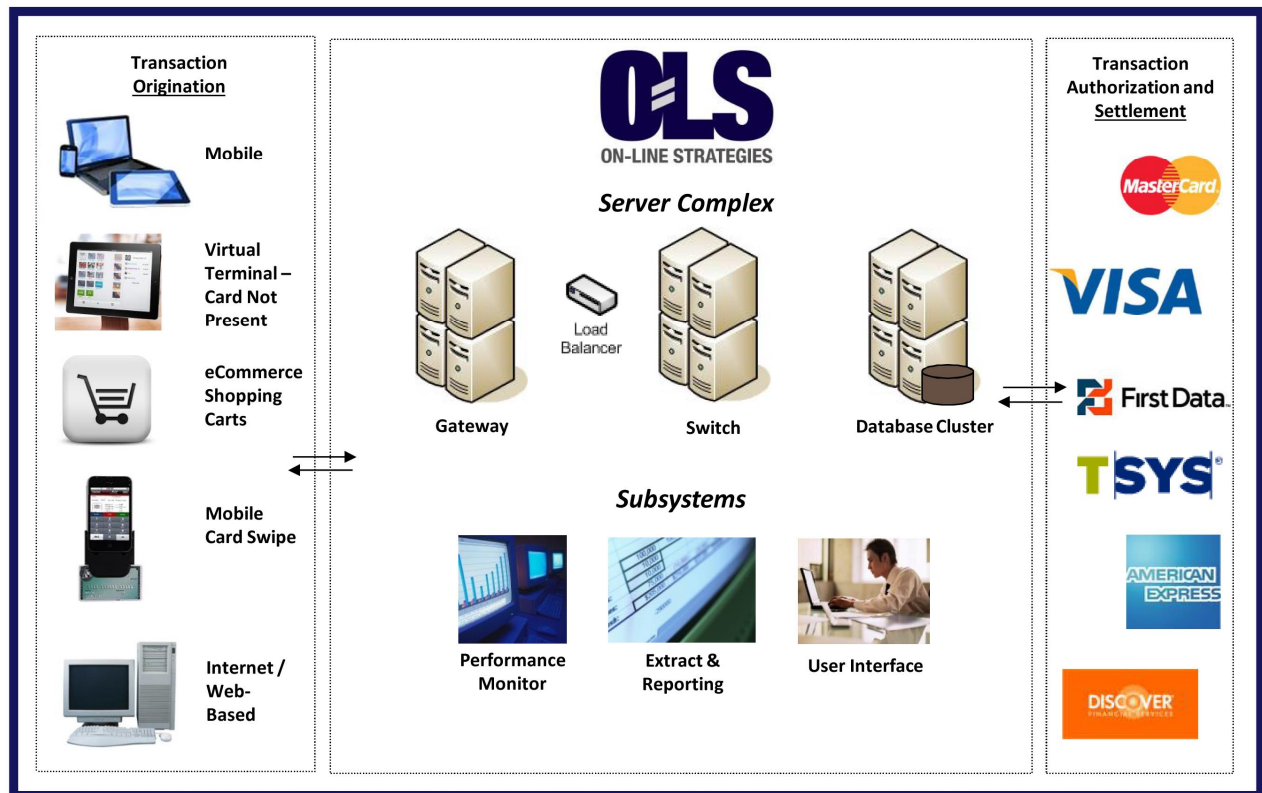

**Positioning Statement:** OLS.Gateway is a payment transaction platform and suite of services, designed for merchants that conduct the majority of their business online or without traditional POS terminals and card readers. Far more than a simple virtual terminal application, services include settlement, shopping cart integration, user-defined flexibilities and an array of features often found only in more advanced payment systems.

**Capabilities:** Following are some OLS.Gateway features:

- Virtual terminal
- Shopping cart integration
- Merchant onboarding
- Flexible receipt configuration
- Automated settlement
- API interface
- Full or partial refunds
- Audit logging / notification messaging
- Merchant support console
- Batch support
- Transaction reporting
- Notification messaging
- User account security
- Test transaction simulation
- Tokenization
- Complete developer center
- Sandbox testing and demo environment
- Configurable fraud controls
- Two-step authentication
- SSL encryption
- Regulatory compliance
- Secure data center
- Recurring payments
- Hosted payments page
- Mag stripe card present support

**Supported Applications:** OLS.Gateway provides merchant acquirer functionality, including a complete electronic payments suite and online shopping cart capability in conjunction with many popular offerings. Supported shopping cart applications include Opencart, Pinnaclear, WordPress, Cubecart, Magento, Zen Cart, osCommerce and PRESTASHOP, with CRE Loaded, Product Cart and Cart Weaver planned for 2013. Additional shopping carts may be integrated, and OLS.Gateway supports both USAePay and Authorize.net emulation.

## OLS.Gateway Configuration

### Results / ROI:

- Reduces IT expense and related staff burden
- Allows for multiple tender type acceptance in-store or online without POS terminals
- Reduces capital expenditure and owned hardware / software maintenance costs
- Improves the buying experience, adds multiple ways to pay, improves throughput
- Eliminates the burden of related regulatory compliance audits, assurance and expense
- Usage-based fee structure is more precise, predictable, and less costly overall
- Available for license or as hosted service
- Improves performance, control, security and accountability
- Offers measurable financial and operational improvement
