

Application Briefing: OLS.Host

Positioning Statement: OLS.Host is the services platform through which all transaction processing requirements are performed and managed in a web-based or traditional online environment. Whether implementing an in-house system, fully outsourcing to us for managing applications within our secure SAS 70 compliant data center, or simply having OLS take on full responsibility and production support for applications hosted at *your* data center, OLS.Host delivers 24x7x365 mission critical performance and regulatory compliance assurance.

Capabilities: OLS.Host provides the seven essential managed services [layers] for successful, technically efficient transaction processing:

- Data center - physical facilities management and residence for all service layers
- Networking layer - manages all communication interfaces and related requirements
- Device layer - management for, and integration with, required hardware devices
- Operating system layer - support and management of operating system(s) and system utilities
- Application infrastructure layer - the software support environment for all applications
- Application layer - essentially where all transactions are processed
- Business process layer - where transactions are initiated and finalized

Supported Applications: OLS.Host presently supports all OLS applications, including the electronic payments, loyalty and rewards, pharmacy claims, card management and general services suites.

Results / ROI:

- Reduces IT expense and related staff burden
- Eliminates the burden of related regulatory compliance audits, assurance and expense
- Simplifies application deployment
- Insulates applications and users from variations in communication protocols and input devices
- Improves performance, control, security and accountability
- Offers measurable financial and operational improvement
